The Mazurka Project

CHARM Symposium
Kings College London
6 January 2006

Recent Progress

- **Collected about 400 performances of mazurkas on 34 CDs**

- **Rough score alignment by tapping to recording**

  For human-assisted alignment of performances to score

- **Basic evaluation of tapping quality**

  How accurate is reverse conducting? / Quality metrics

- **Raw input to automated alignment process**

  Andrew will present current state of automatic alignment

- **Website for data and analysis results:**

  `http://mazurka.org.uk`

Sample Performance Listing

		Duration	*Performer (year)*	*Label*
Mazurka in A minor	Op. 17, No. 4	4:36	Chiu (1999)	HMX 2907352.53
		4:03	Horowitz (1971)	S3K 93039 Legacy
		4:00	Horowitz (1985)	DG 419 045-2
		4:48	Indjic (2001)	Calliope 3321
		4:00	Luisada (1990)	DG 463054-2
		4:05	Magaloff (1977)	Philips 456 898-2
		3:23	Paderewski (1912)	Philips 456 919-2
		4:30	Perahia (1994)	Sony 45931
		4:20	Rosen (1989)	Globe 5028
		4:16	Rubinstein (1939)	Naxos 8.110656-57
		3:41	Rummel (1943)	Dante HPC027
		2:15	Smith (1975)	EMI 724358576726

Full list of collected performances at:

`http://mazurka.org.uk/info/discography`

Reverse Conducting and Score Alignment

Lots of Tapping

- Reverse conducting of same performance 20 times
  - used to smooth out errors in individual sessions
  - used to test various automatic windowing methods (such as SD)
  - takes about 3 hours / performance to record and process 20 trials

    So 2 performances can be tapped per day
  - about 400 performances of the mazurkas collected
  - 20 performances have been reverse conducted thus far:

    7 performances of Op. 7, No. 2 in A Minor
    6 performances of Op. 7, No. 3 in F Minor (initial test case)
    7 performances of Op. 17, No. 4 in A Minor

Data Entry Method

- **`backbeat.exe`: command-line program for recording tap times**

- Absolute time from first click in milliseconds.

- Other 3 fields for error checking (during performance and afterwards).

- Computer keyboard resolution is 5 milliseconds.

Space bar records beats

Any letter records barline and first beat of measure

Example output:

Beat duration (quarter note)	*Metric position*	*Absolute Time (ms)*	*Delta Time (ms)*	
**kern	**beat	**abstm	**deltatime	
=1-	=1-	=1-	=1-	
4	1	0	0	
4	2	391	391	
4	3	741	350	
=2	=2	=2	=2	
4	1	1080	339	
4	2	1454	374	
4	3	1807	353	
=3	=3	=3	=3	
4	1	2108	301	
4	2	2448	340	
4	3	2785	337	
=4	=4	=4	=4	← *barline*
4	1	3108	323	
4	2	3472	364	
4	3	3812	340	

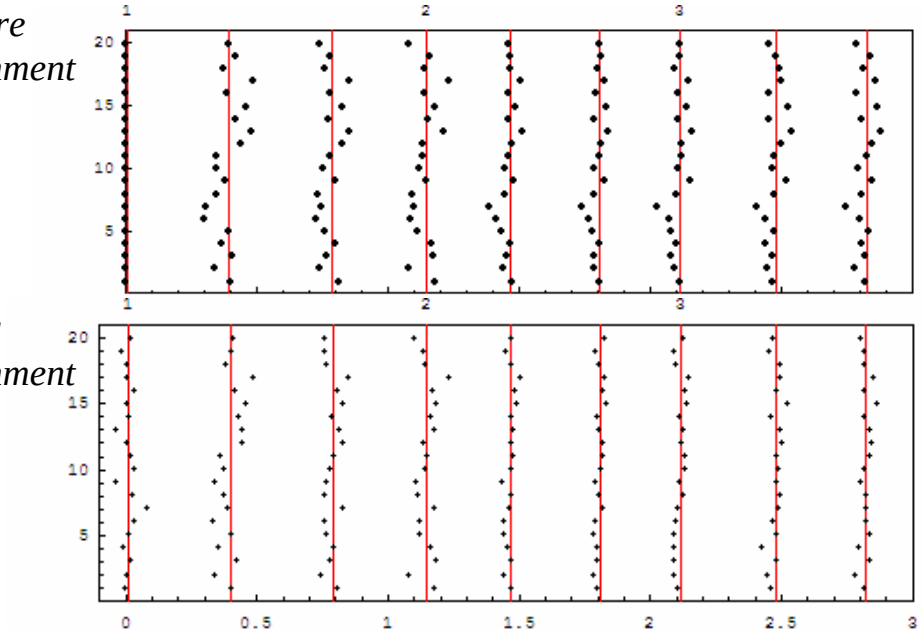
`http://mazurka.org.uk/info/revcond`

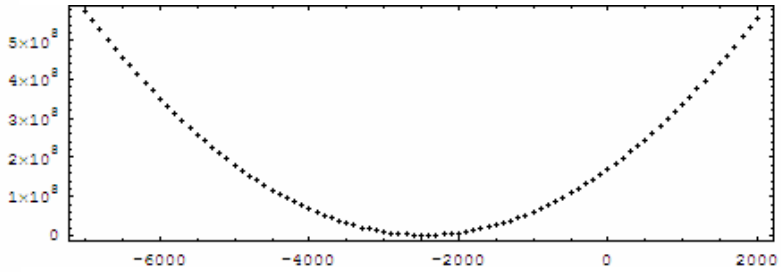
Offset Alignment with Audio

- Need to align first tap to first note in recording.
- Cannot just measure start time of note in audio.
- Individual tapping trials aligned by least squares fit to a sample of manually measured beat time in audio file.

Before alignment

After alignment





Typical deviations from correct offset:
5, -12, -27, -36 ms

Examples of final alignment:

Play pid5667230-10-avg (Friedman 1930)

Play pid54293-08-avg (Perahia 1994)

Tapping Summary Data

**kern	**beat	**time	**dur	**min	**max	**cmin	**cmax	**sd

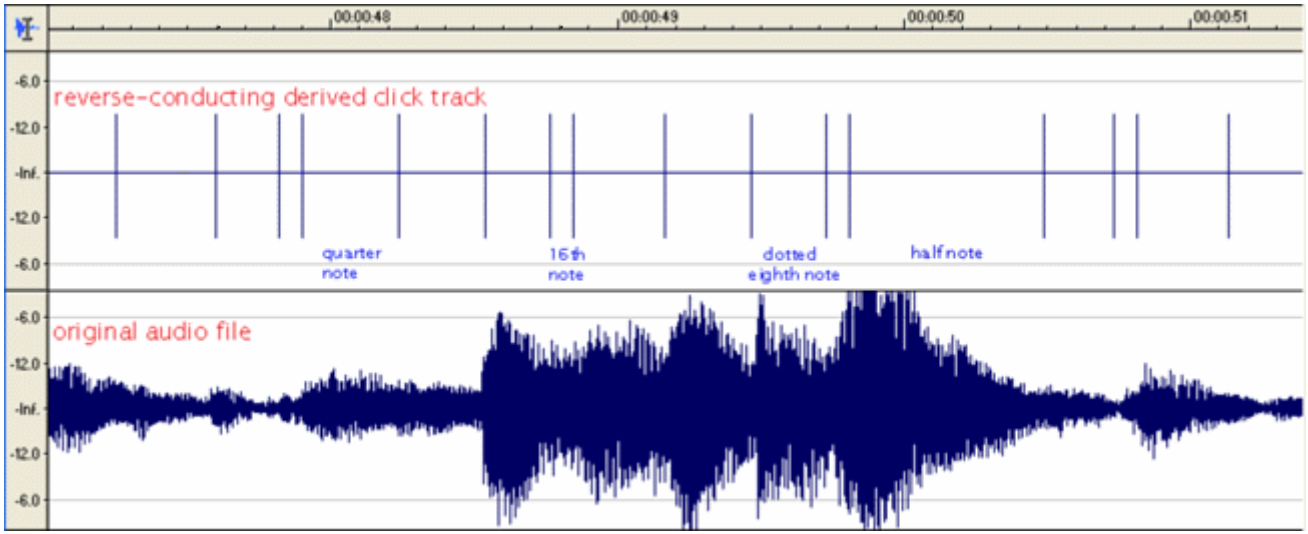
Tapping Quality Measurements

Manual correction of the beat times



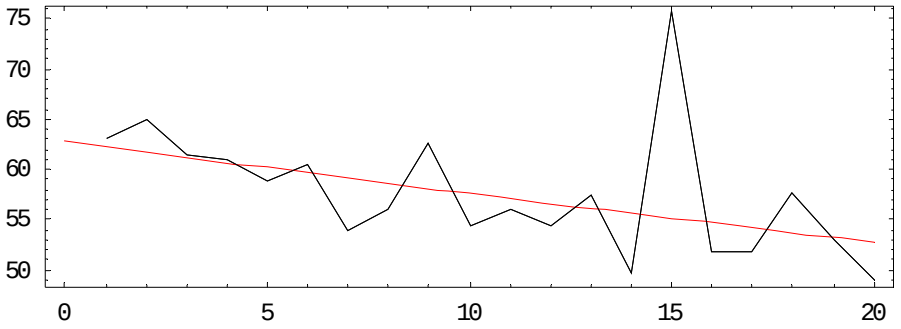
- Align tapped beats within 10 ms by ear/eye in sound editor
- Each beat alignment takes about 1-2 minutes on average
- 300 beats in each mazurka = 1 to 2 days for a performance
- Necessary for evaluation of automatic alignment
- 4 manual corrections done to date (for 7-2 & 7-3)

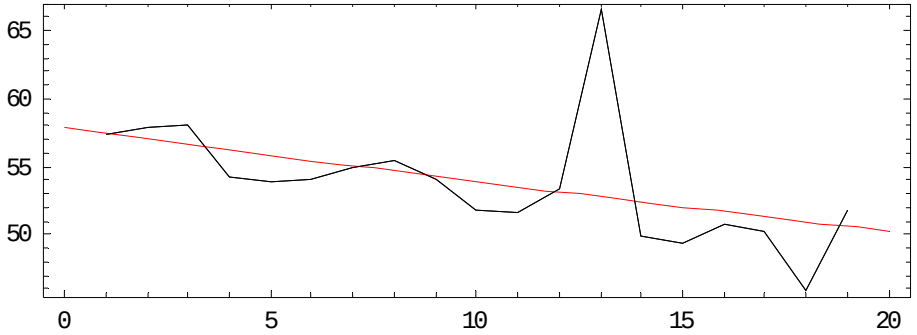
Play pid5667230-10-corr (Friedman 1930)

Learning Curves for 4 Performances

Mazurka in F Minor, Op. 7, No. 3

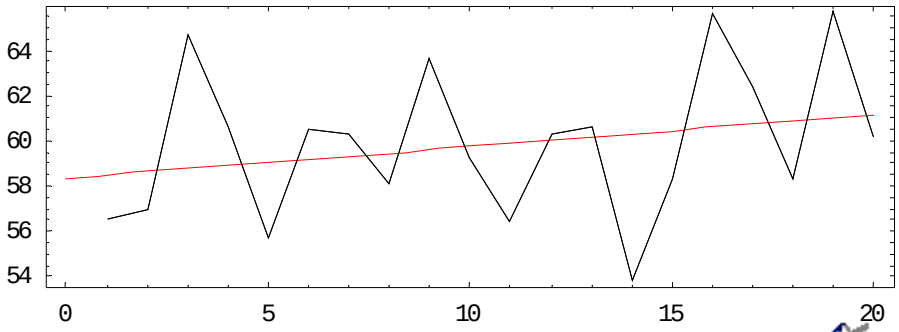
Rosen 1989 **Friedman 1930**

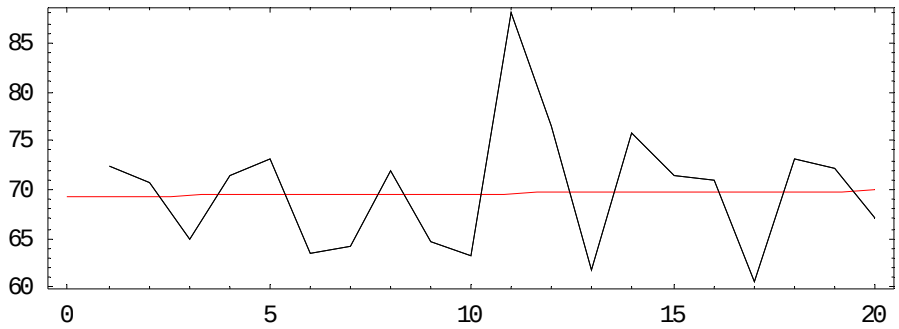




Mazurka in A Minor, Op. 7, No. 2

Chiu 1999 **Friedman 1930**

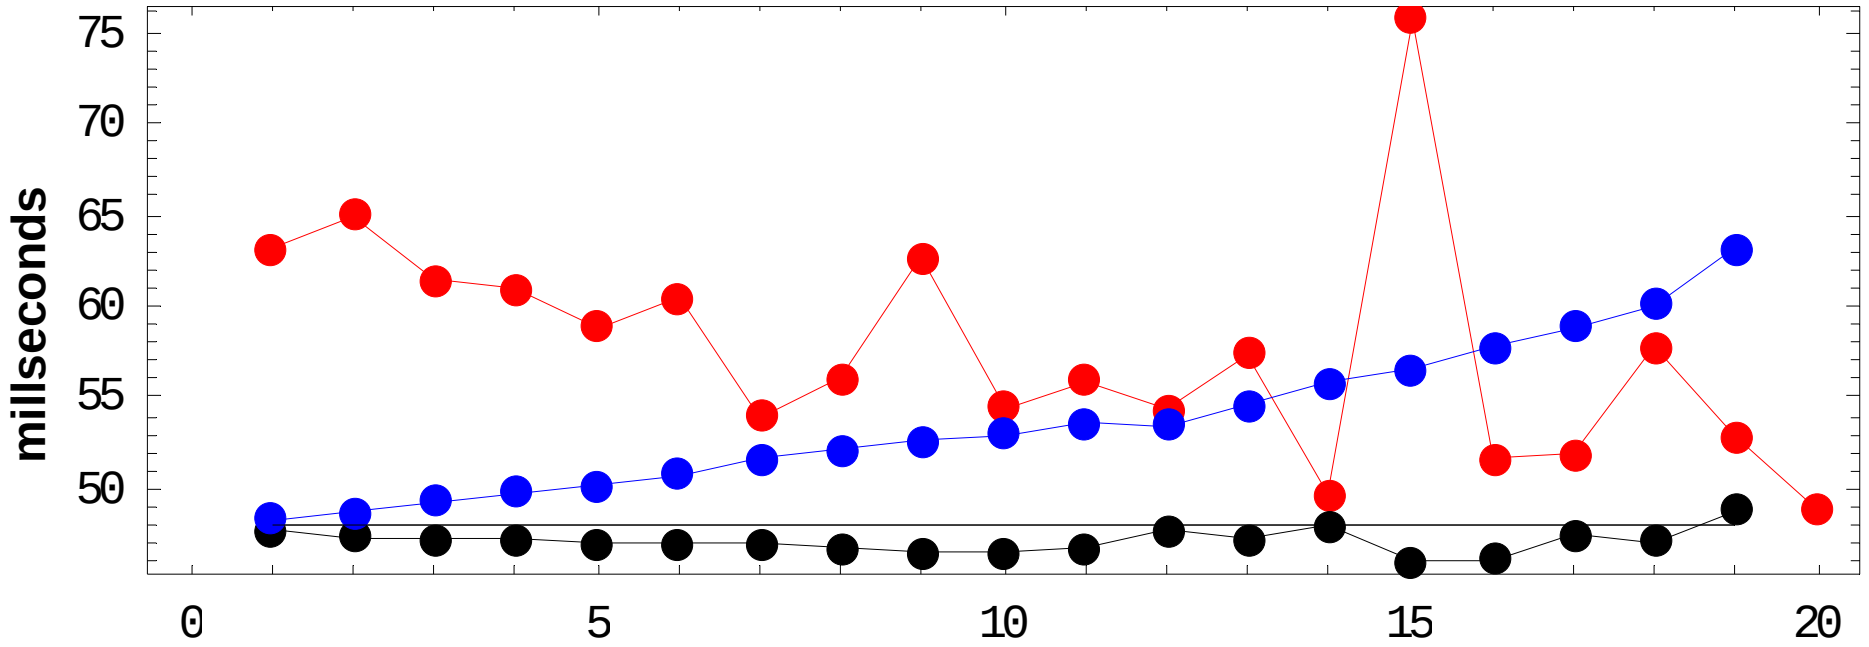




Play pid9048-06-avg (Chiu 1999)

Average Displacement Errors

Mazurka in F Minor, Op. 7, No. 3
Rosen 1989



= individual trial average displacement errors

= dropping more and more later trials

= dropping more and more earlier trials

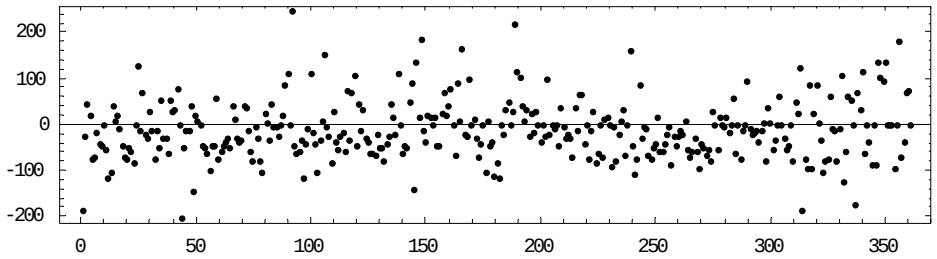
Correction Offsets

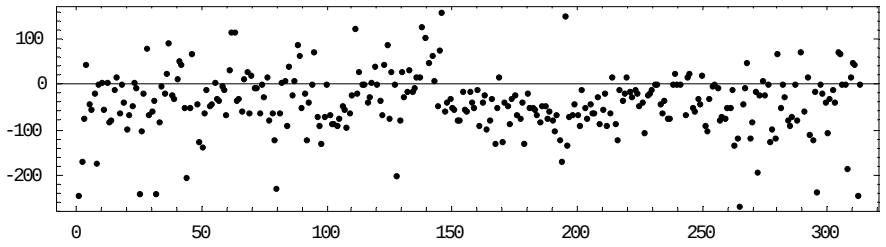
The top plots show amount of time in milliseconds between corrected beat times and average manually tapped beat times. Lower plots display a histogram of same.

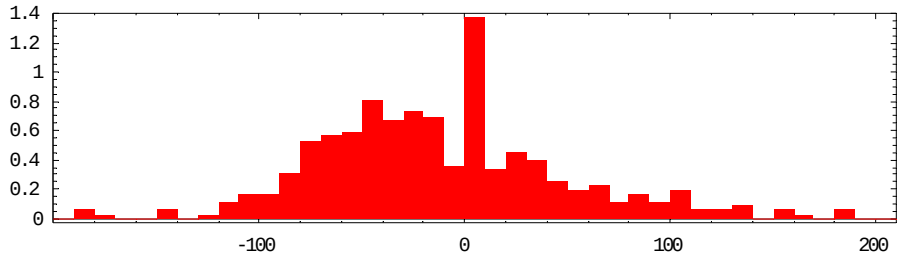
Spike at 0 in histograms due to 10 ms audible corrections resolution.

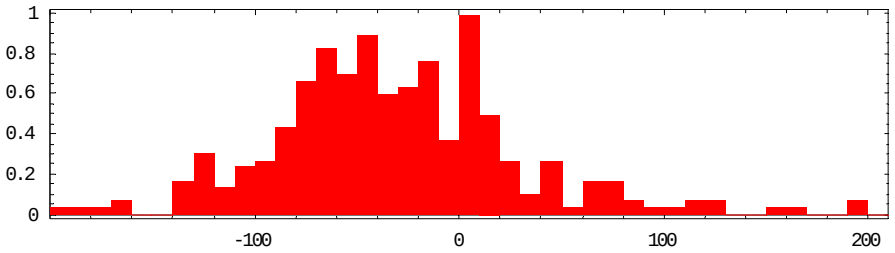
Mazurka in A Minor, Op. 7, No. 2

Chiu 1999 **Friedman 1930**









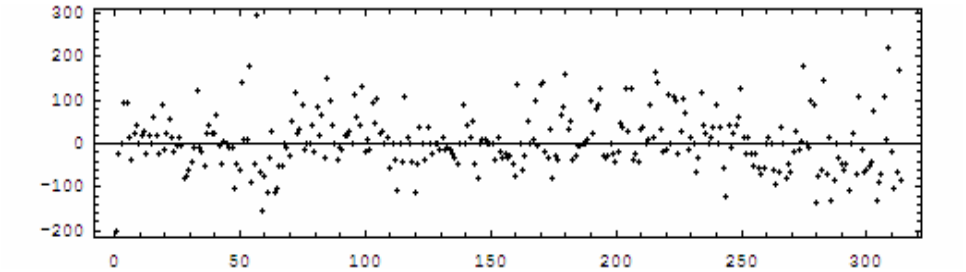
49 ms avg correction; -12 ms overall shift

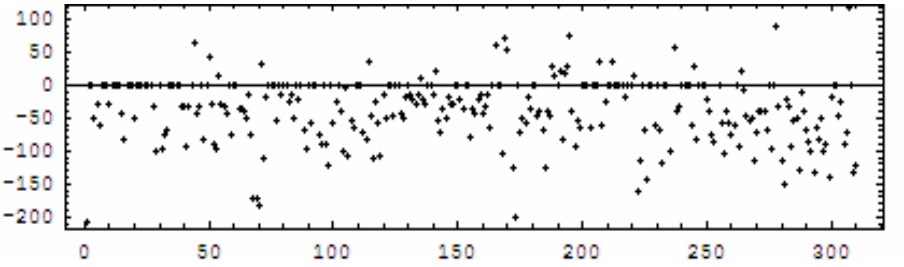
60 ms avg correction; -36 ms overall shift

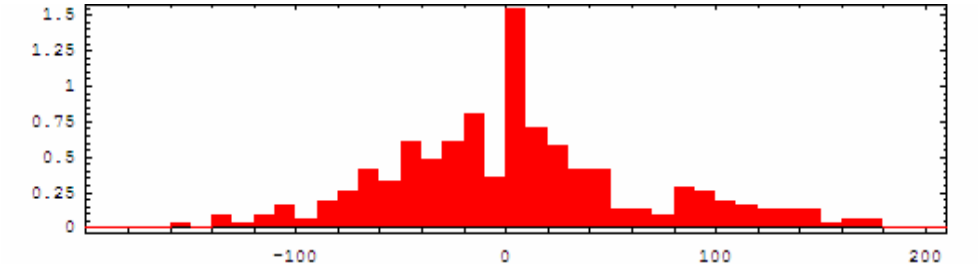
Correction Offsets (2)

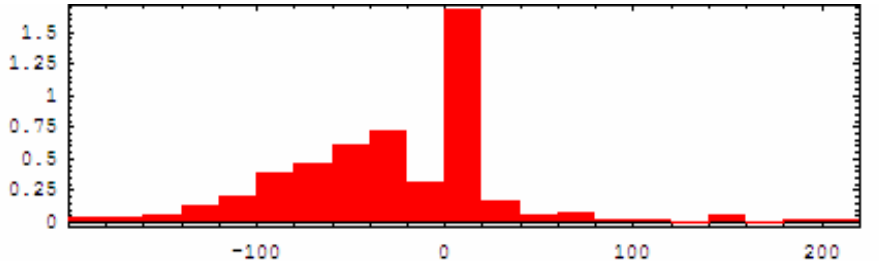
Mazurka in F Minor, Op. 7, No. 3

Rosen 1989 **Friedman 1930**







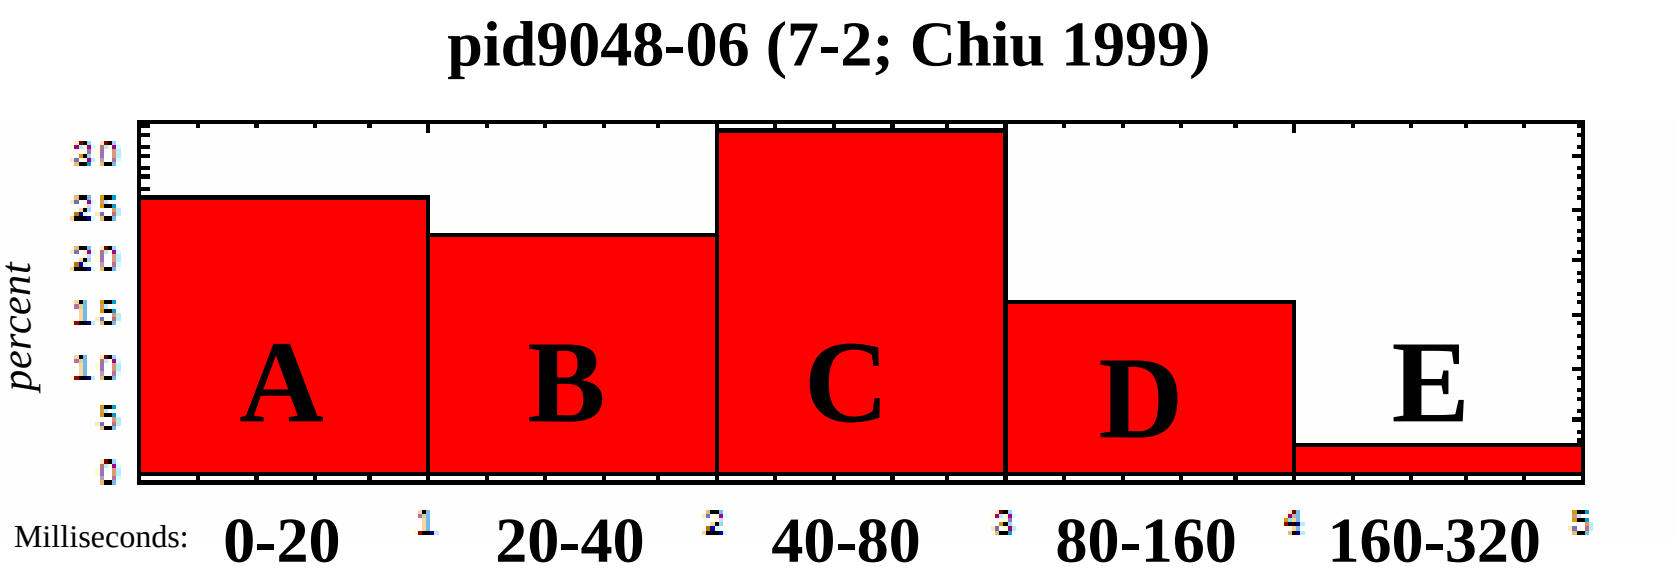


48 ms avg correction; +5 ms overall shift

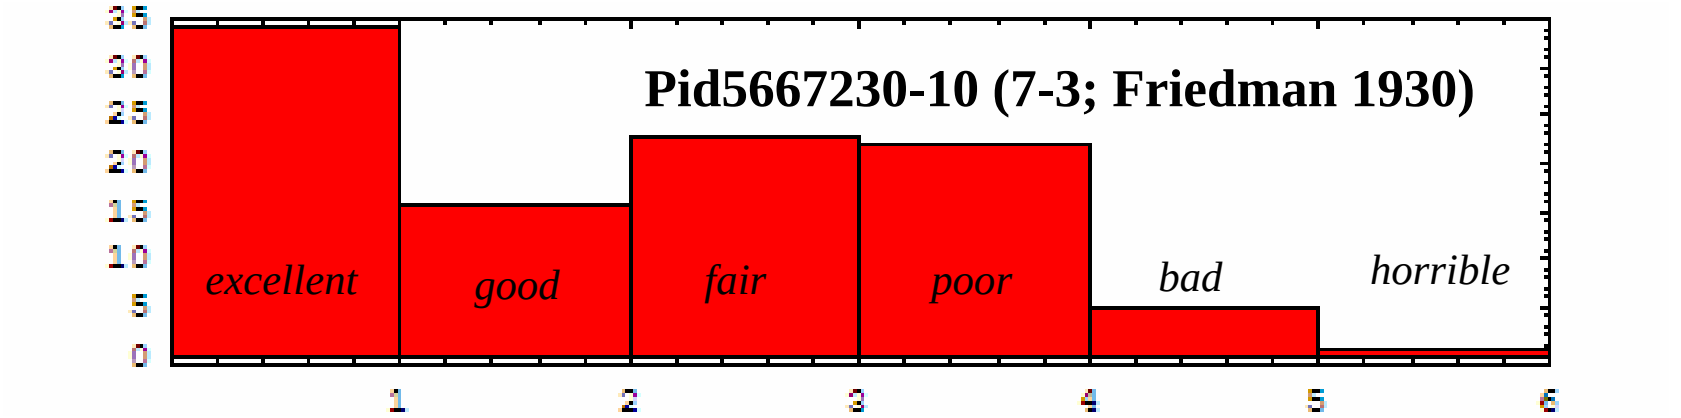
48 ms avg correction; -27 ms overall shift

Beat Accuracy Metric

Logarithmic scale to measure differences between tapped and true beat location:



- Human tapper: 48% of beats within 40 milliseconds

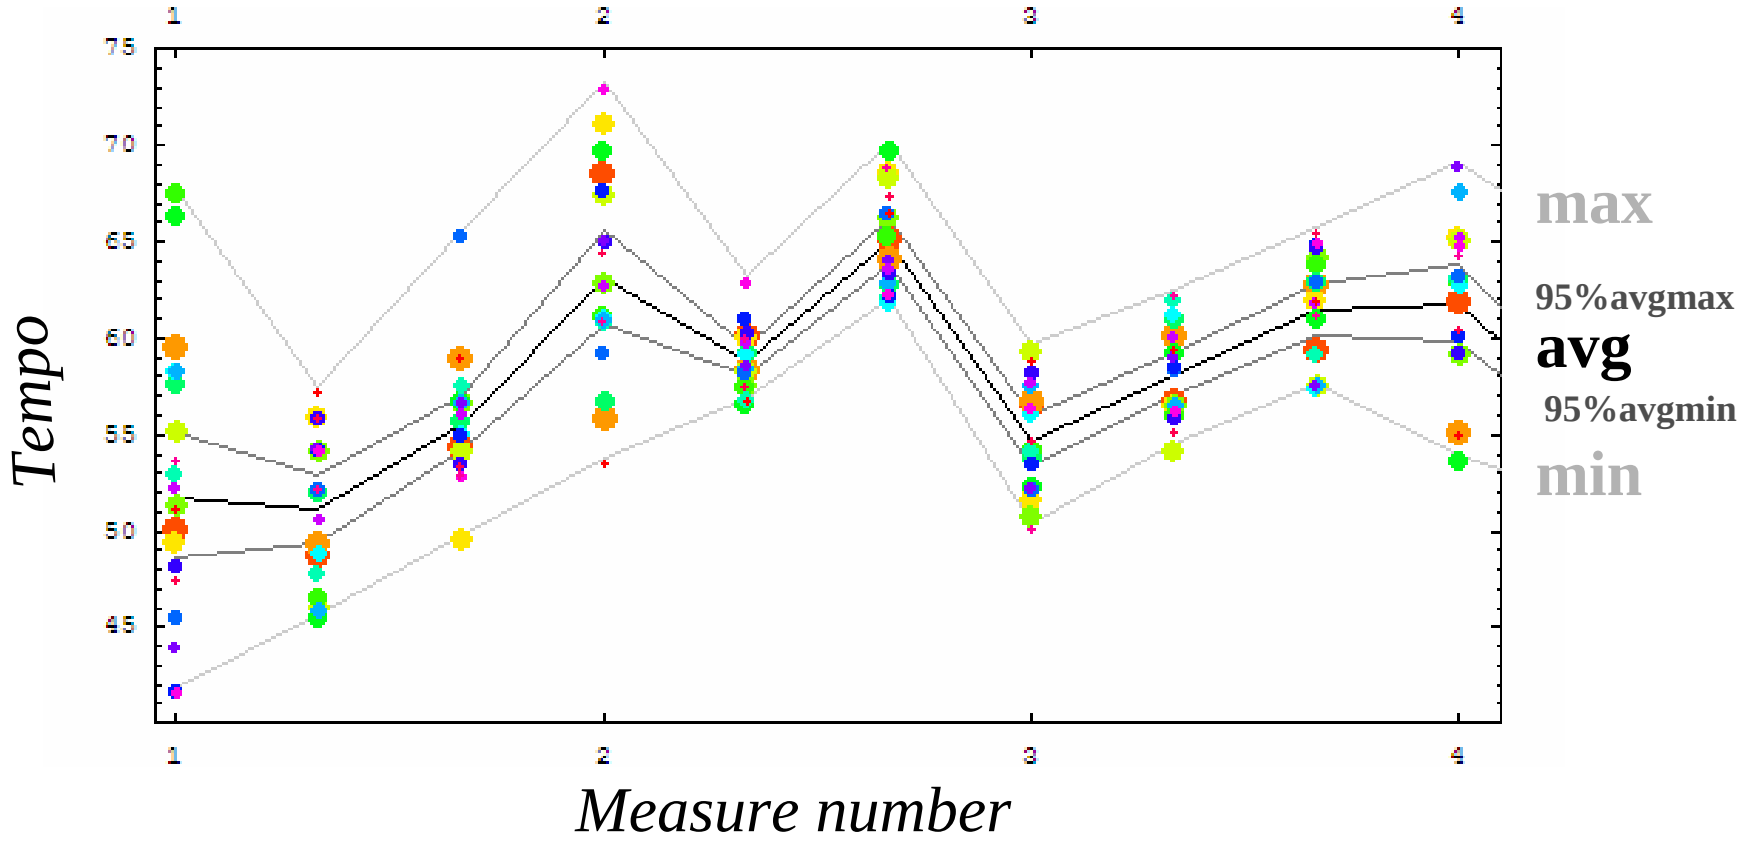


Automatic Score Alignment

Current Work

- **Tempo Plots**
- **Tempo Correlation Analysis**
- **Performance Reconstruction**

Tempo Plots



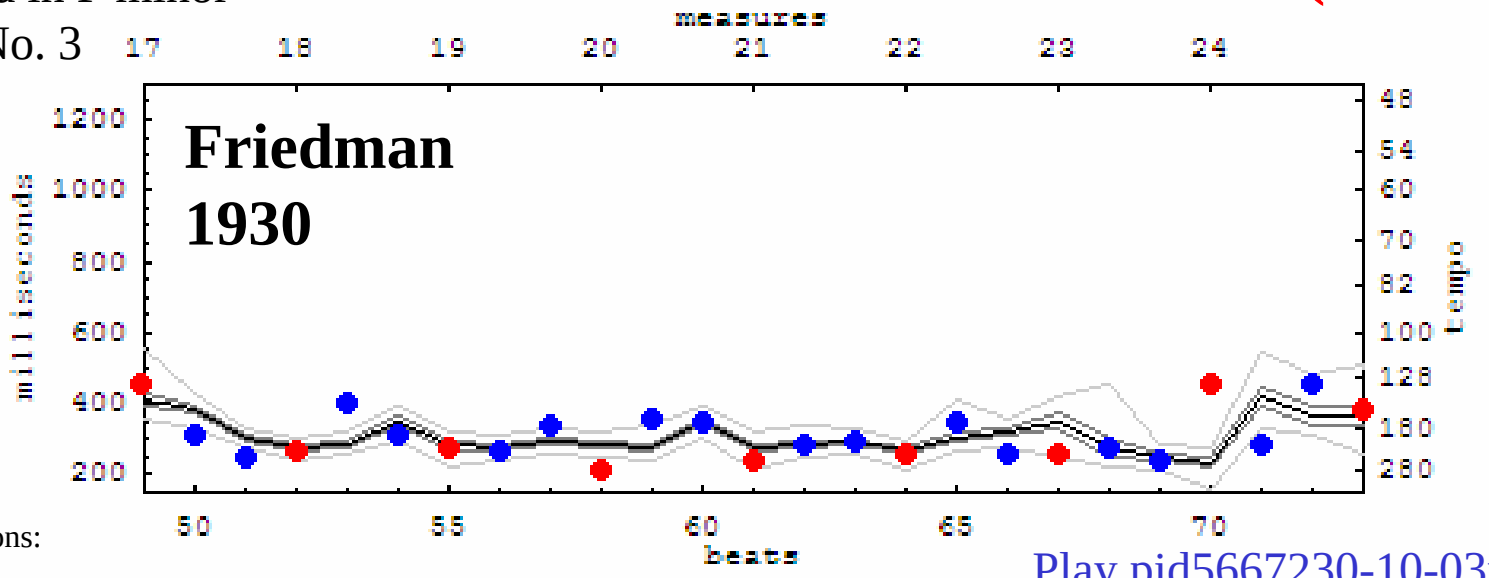
Individual trials
(smaller = earlier trial) &
(red = earlier; purple=later trial)

Friedman 1930
Op. 7, No. 3

Tempo Plots Op. 7, No. 3

Mazurka in F minor
Op. 7, No. 3

(rubato)



Manual corrections:
Red dot = beat 1
Blue dots = beats 2 & 3

Play pid5667230-10-03m

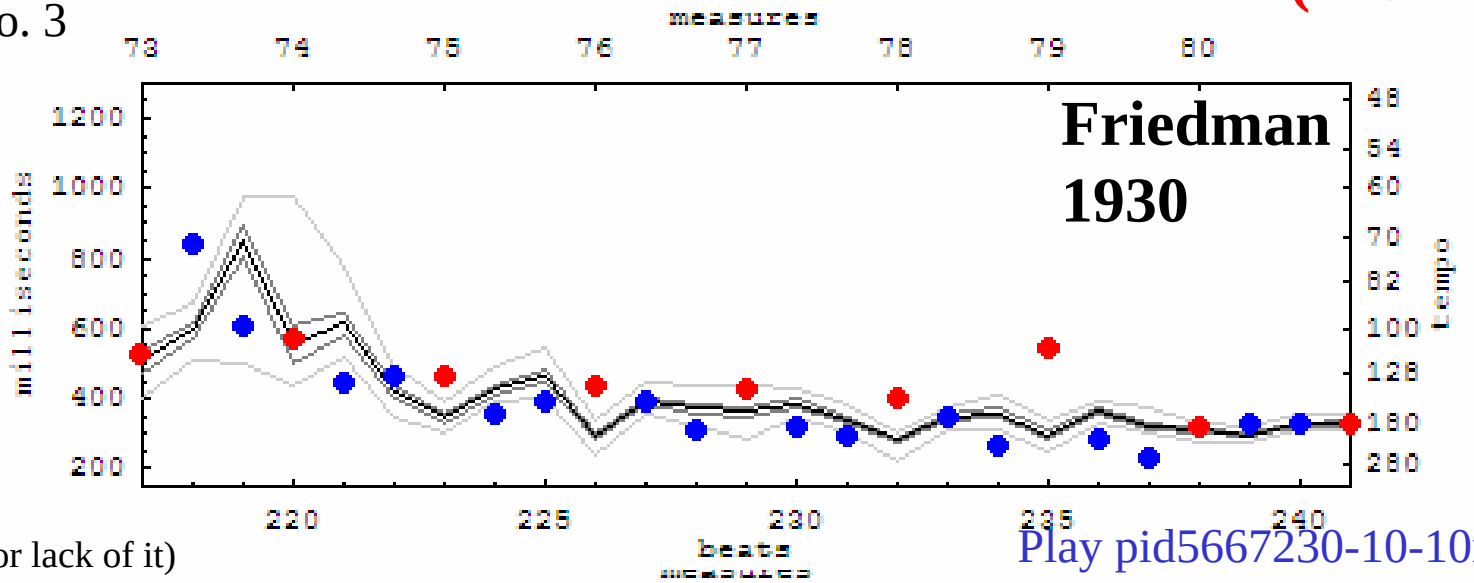
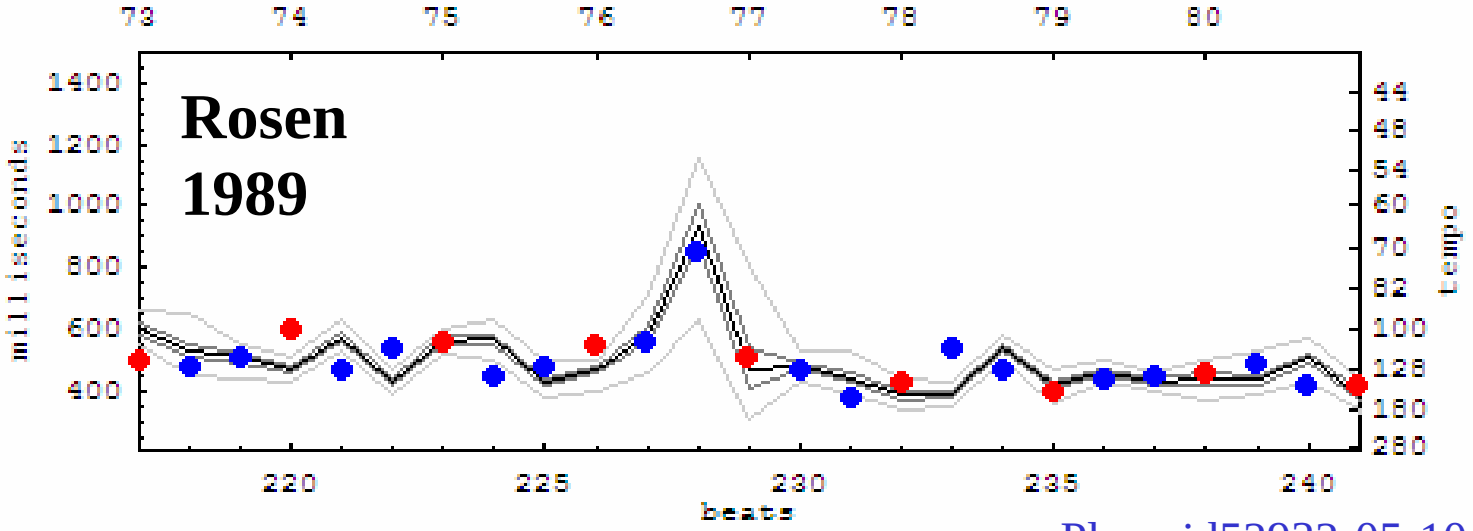
Op. 7, No. 3

(boundaries)



(Note surprise or lack of it)

Play pid5667230-10-10m



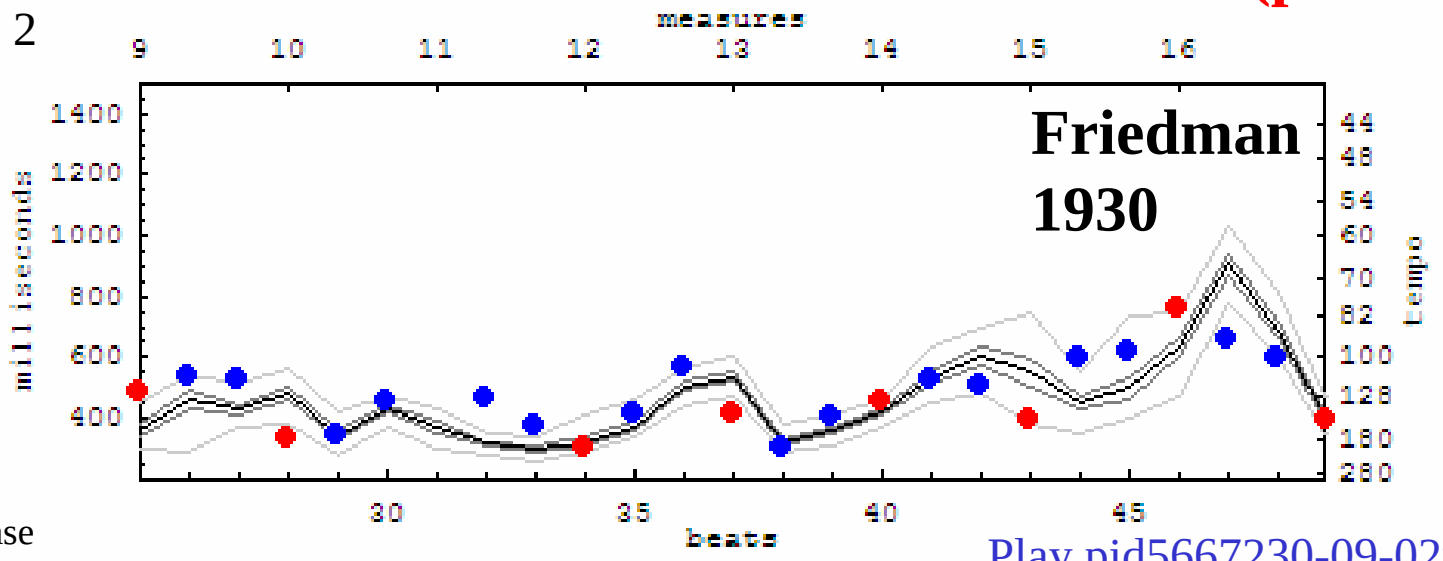
Play pid52932-05-10m

Tempo Plots Op. 7, No. 2

(Third beats red)

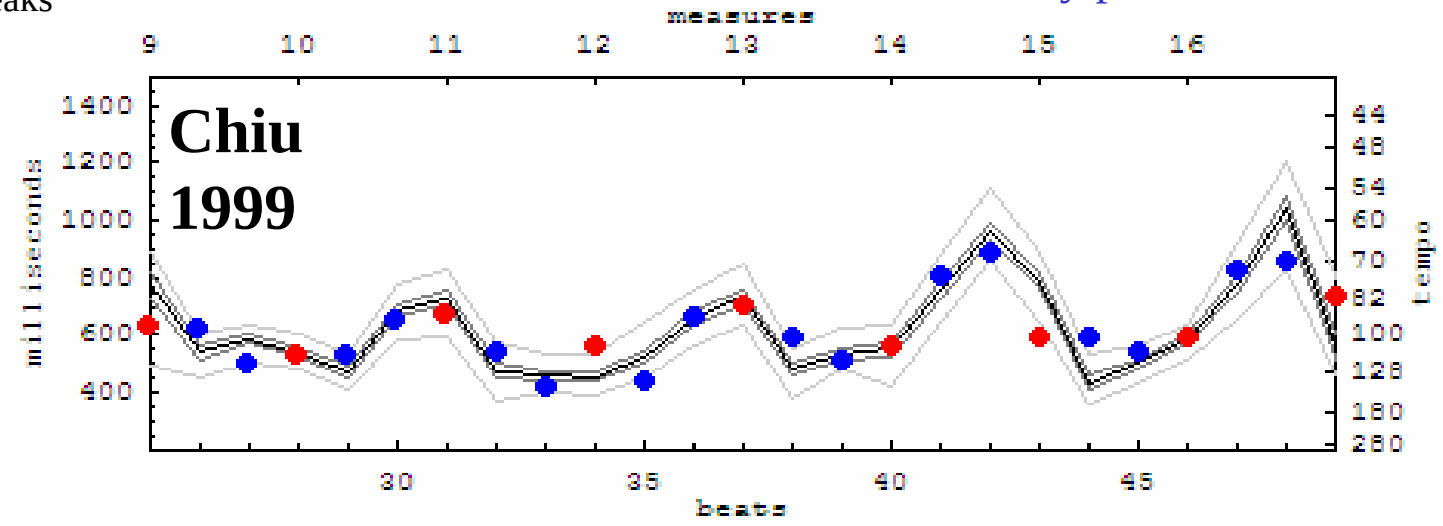
(phrasing)

Mazurka in A minor
Op. 7, No. 2



Very clear phrase boundaries (peaks every two measures):

Play pid5667230-09-02m

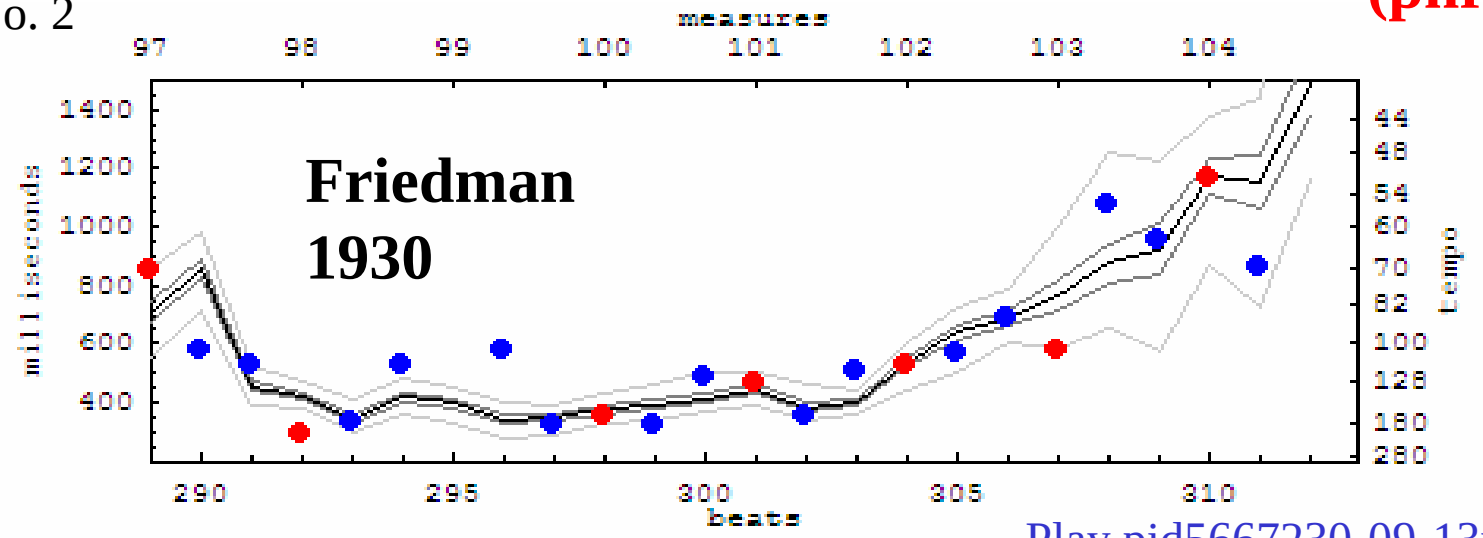


Play pid9048-06-02m

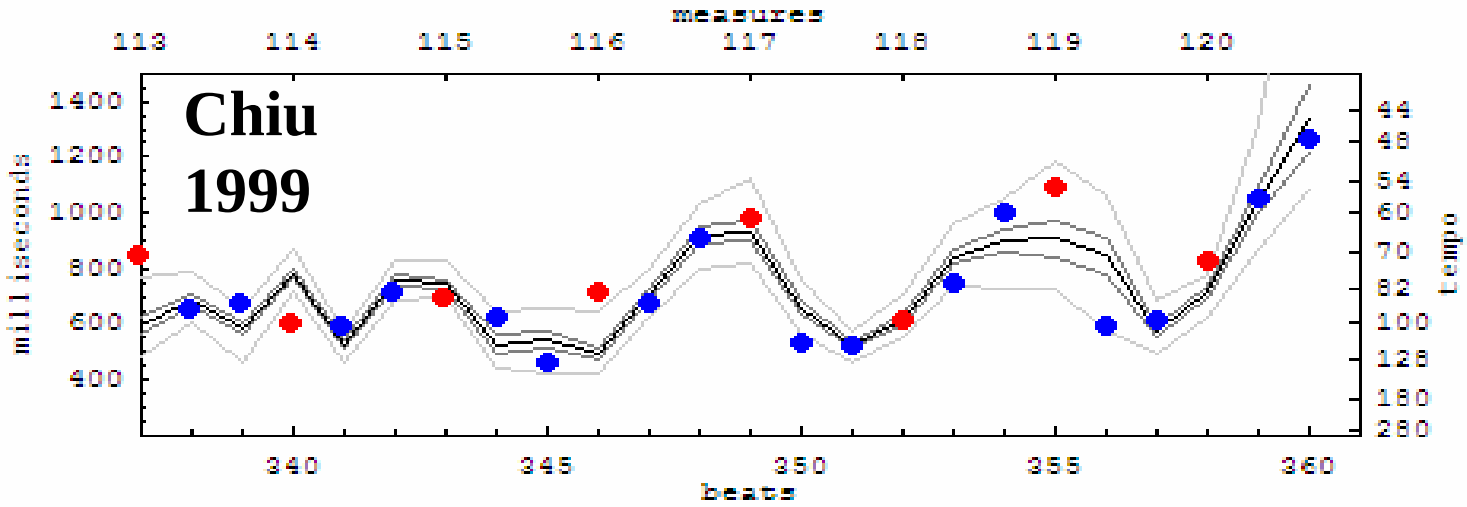
Tempo Plots Op. 7, No. 2 (2)

Mazurka in A minor
Op. 7, No. 2

(Third beats red)
(phrasing)



Play pid5667230-09-13m



Play pid9048-06-15m

Tempo Correlation

Pearson's product moment correlation:

$$\frac{\sum (x - \bar{x})\,(y - \bar{y})}{\sqrt{\sum (x - \bar{x})^2 \sum (y - \bar{y})^2}}$$

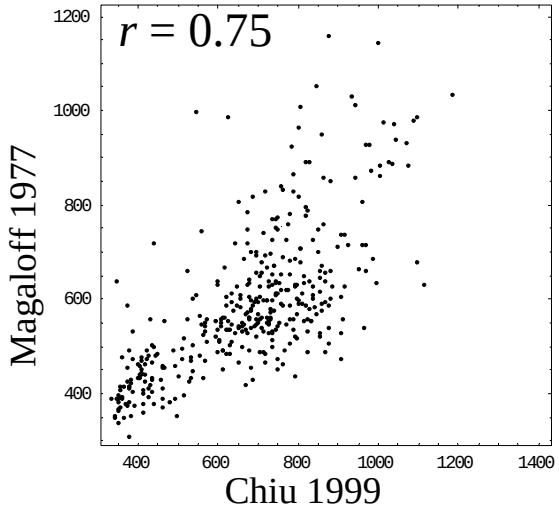
- Correlation value in the range from -1 to +1.
- 1 means exact correlation, 0 means no correlation, -1 is anticorrelation
- Used in the Krumhansl-Schmuckler key-finding algorithm

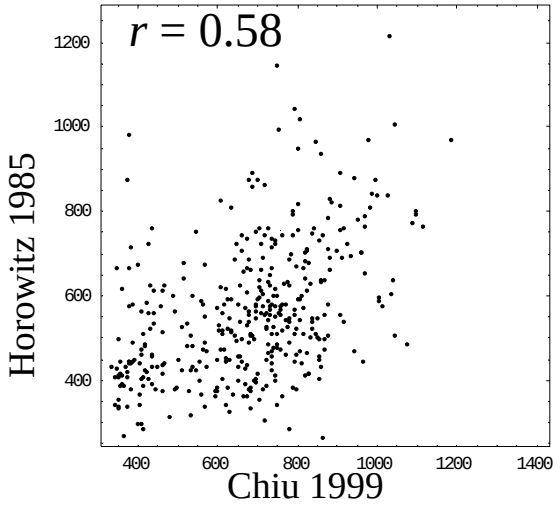
- Other types of correlation metrics, such as:
  Spearman Rank Correlation Coefficient

Tempo Correlation (2)

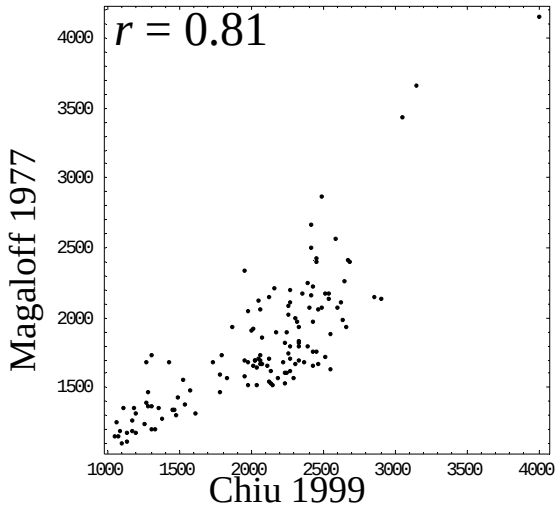
Op. 17, No. 4

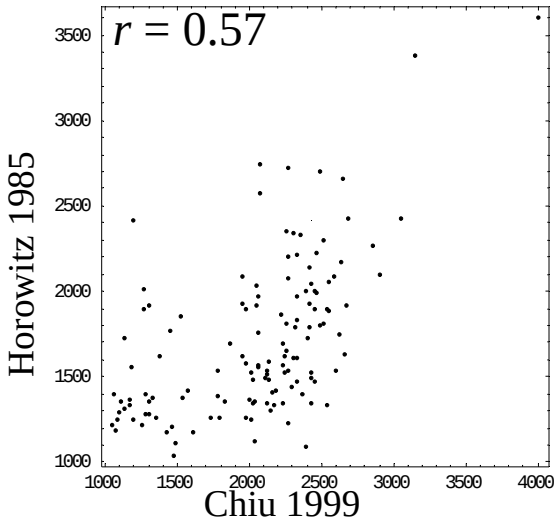
Beat durations:





Measure durations:

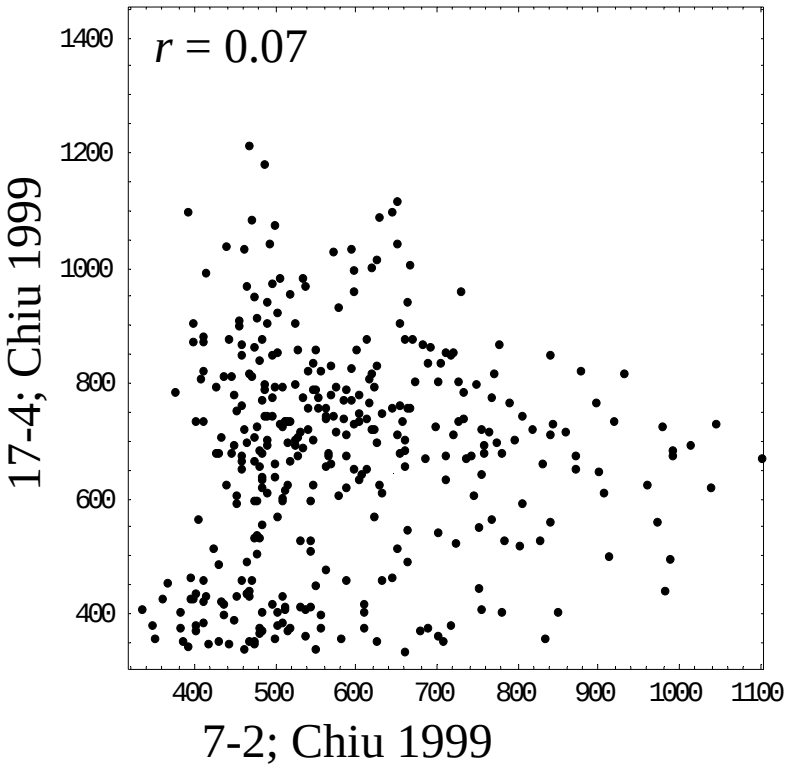




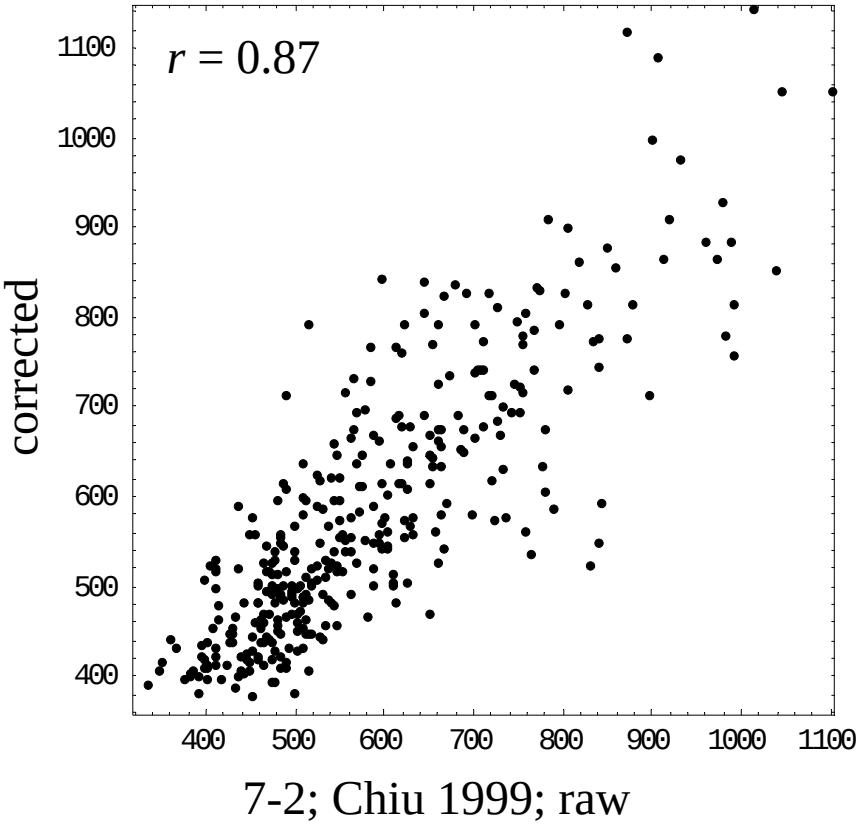
Tempo Correlation (3)

correlation extremes

Comparing two unrelated pieces:

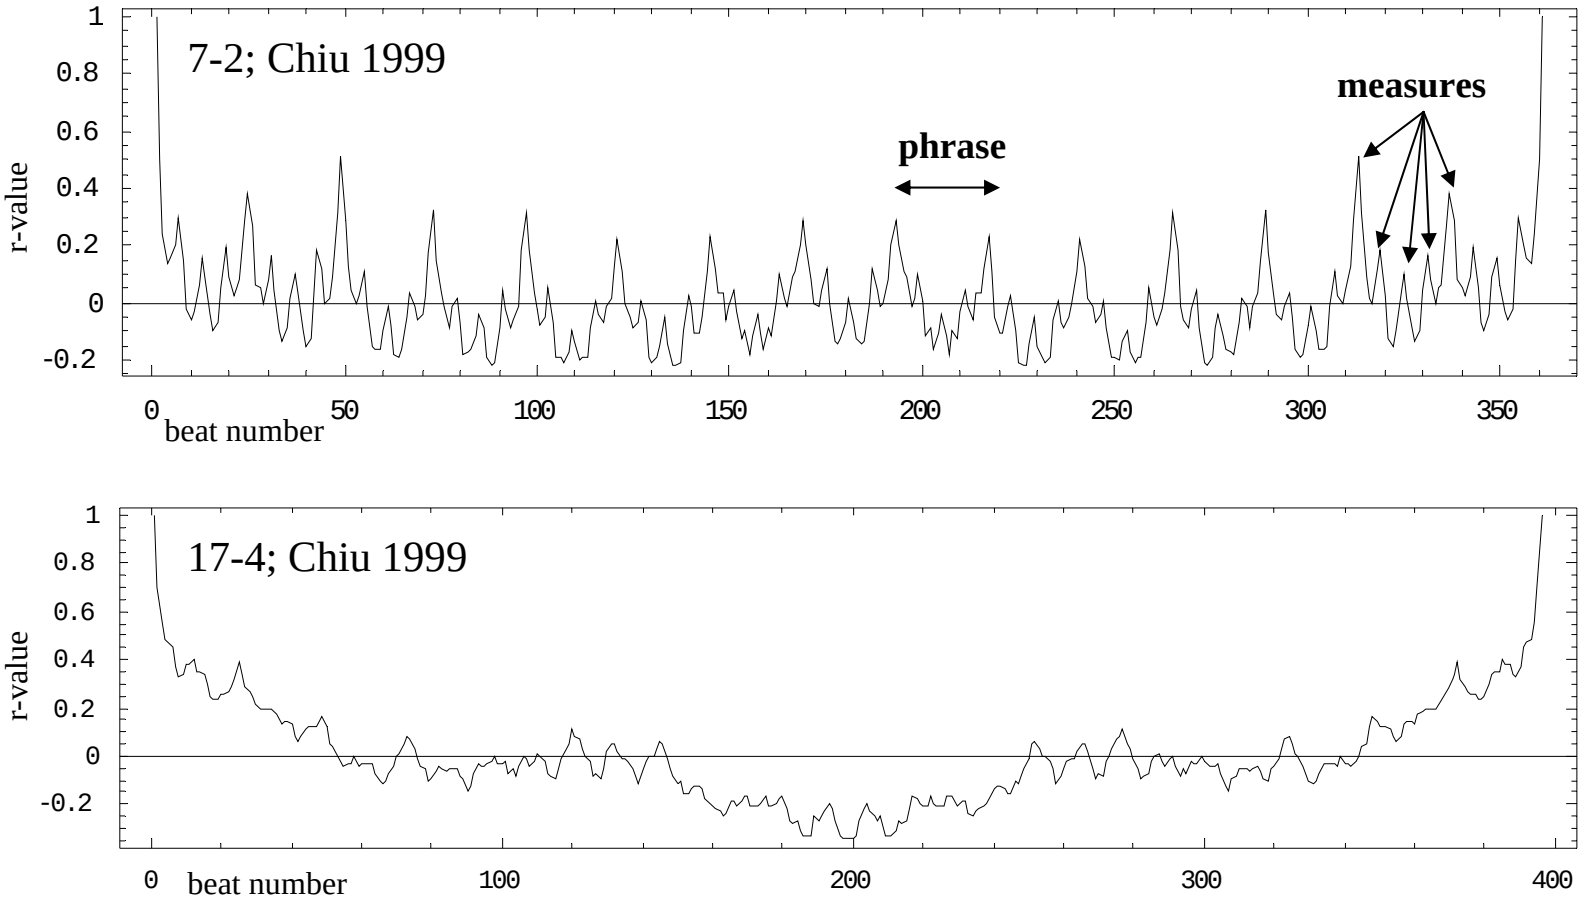


Raw and corrected reverse conduction:



Tempo Correlation (4)

Autocorrelation with shifted performance



Performance Reconstruction

- Simulate performances of the score from various components:

Tempo

- **Constant tempo** → boring
- **Measure tempo**
- **Beat tempo** → phrasing
- **Tempo of offbeats** → jazzing
- **Exact duration of all notes** → Non-simultaneous beat events

Dynamics

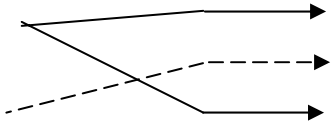
- **Constant Loudness** → boring
- **Chordal Loudness** → dynamics
- **Note Loudness** → voicing

Also durations for: staccato, legato & pedaling

Performance Reconstruction (2)

First Reconstruction:

- Use tap timings to control the tempo of each beat
- Interpolate expected times of offbeats



- Convert score to MIDI using **time data with inferred durations.

- **7-2; Chiu 1999** Play pid9048-06
- **7-2; Chiu 1999 reconstruction** Play pid9048-06-rA
- **simultaneously** Play pid9048-06-sim

Future Work

***Audio*:**

- Minimize alignment errors/Speed alignment process
- Automatic alignment of offbeats after beats are verified
- Non-simultaneous chord note timing offsets
- Note dynamics

Performance Analysis:

- Characterize and compare performances

  Automatic identification of “schools” of music?

- Identify importance/relation of timing and dynamics
